

FIRST(For Inspiration and Recognition of Science and Technology) is an international organization that operates robotics competitions for young teenagers from all age groups. Students who are members of FIRST have the chance to learn and develop their skills in both engineering and technology fields. Students at Michigan Lutheran High School may have the chance to join a FIRST robotics team(Team 2959) with other students from different schools who have the same interests.

Our team is also one of the top teams in the whole world to have won numerous awards every year. As a member of team 2959, students have the chance to choose the exact aspect of the project on which they want to work. The various aspects of the robot project include design, programming, marketing, building and so on.

Different mentors are in charge of different departments, which make the workload specialized. The robotics team is more like a community in that members help each other in every area of the project not only in their own area. Students are not required to attend everyday, but helping with the building aspect of the project is always available for students after school.

Robotics is not only about robotics. Students have the chance to do more activities together like fundraising, visiting different places even outside Michigan while in a robotics event. More information could be found in the team link below:
